

PROTECT CREWS and your **BOTTOM LINE** with Real-Time Voltage Detection

Key Pain Points for Electrical Contractors

High-Risk Environments: Unfamiliar equipment, outdated drawings, and varying skill levels.

Strict Safety Metrics: Even one serious incident can harm your Experience Modification Rate (EMR) and disqualify you from future bids.

Competitive Edge: Large-scale or high-end projects often demand innovative safety measures.

Reputational Risk: A single accident can cost millions in losses and damage your standing in the industry.

Lack of Data: Training gaps remain hard to spot without precise, real-time analytics on near misses.

Proxxi Band was awarded the
2025 IEEE ESW Product of the Year

What Proxxi Does

Proxxi Band is a wearable voltage detector (wristband) that provides vibration, audio, and visual alerts whenever workers approach energized equipment. By adding a proactive warning layer on top of Lockout/Tagout (LOTO) and PPE, Proxxi helps minimize human error and reduce electrical contact incidents on unpredictable job sites.

Proxxi Dashboard offers real-time analytics — tracking alerts, usage patterns, and high-risk zones — so you can address hidden hazards faster and prove safety performance to clients.

A single **electrical incident** can lead to **major downtime, high medical expenses**, and **long-term reputational damage**.

Why Contractors Choose Proxxi

Reduce Near Misses & Injuries: Real-time alerts help avert unknown hazards before they become accidents.

Stay Eligible for Bids: Demonstrate strong safety metrics and an innovative approach to Environment, Health, and Safety (EHS).

Improve ROI: Proxxi helps contractors preserve contracts and protect their bottom line by reducing near misses and accidents.

Safeguard Your Brand: Consistent, data-driven safety performance is key to winning and retaining premium clients.

Leverage Data for Continuous Improvement: Use the dashboard to spot trending issues, refine training, and show prospective clients a data-driven commitment to safety.

CUSTOMER VOICE: TRI-CITY ELECTRIC

"In our line of work, we're often in unknown environments. That's why we made a new rule: If you're wearing your safety glasses, you're wearing your Proxxi. It's our last line of defense against the unexpected."

— Todd Daily, Vice President of Engineered Solutions, Tri-City Group
